Table 1

Commit	Mobile Score	Desktop Score	Changes	Comments				
48762ab	77	90	No change	Initial				
d1b472c	77	90	Move all JS at the bottom of the html just before </body> tag	This is the practice at my workplace.				
f68523e	77	90	Make css in style.css inline in index.html	No more render blocking				
83c7467	78	91	Change rel="stylesheet" to rel="prefetch" for print.css	This is suggested by the preloaded website.				
7825db3	96	97	Add media="print" to print.css	High score because the this commit includes the previous commit that comment out the google font for now.				
3631d13	96	97	Make google font as inline css in index.html	I was able to find a similar inline css font but not exactly with the google font.	The next commits after this with the date of 01/21/2015 are on caching. I followed the link as provided by pagespeed and search the internet but the score did not improve. I tried the manifest attribute in the html tag and the .htaccess but still no improvement. Either I'm doing something wrong or .htaccess is not enabled in github. I could not make ngrok to work that is why I decided to run it inside github.			
ce6f61d	97	98	Import then export images in Aperture and noticed file size got smaller.	Some optimization may have happened in Aperture upon export.
